POST PAGE

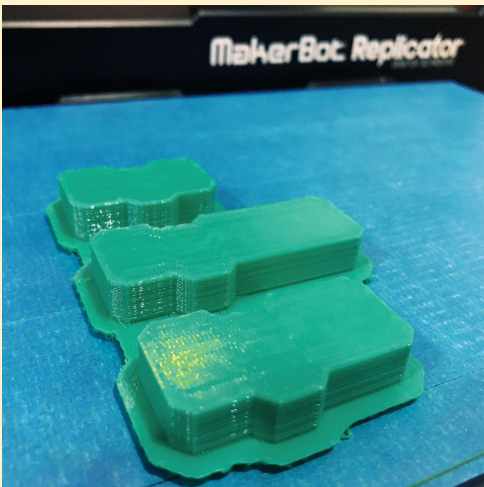

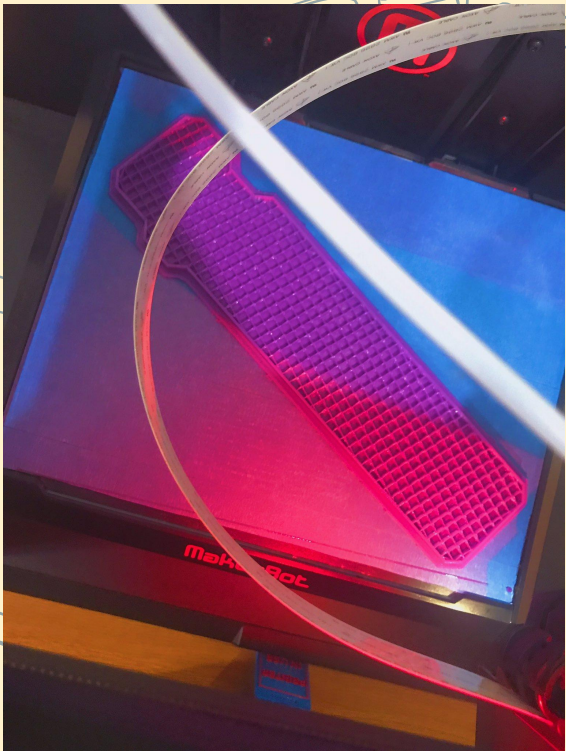

Hello, my name is Ummaromana Sama...

It wasn't until high school that I became immersed in the world of Computer Science where I found my passion. For many years, I remained undecided about what I intended on doing in the future because I didn't find a drive that kept me going. The start of it was very foreign and so much for me to explore. Once I got a grasp of Computer Science I ran with it. The various programming languages taught me there is more than one way to arrive at a solution and efficiency is the key to coding. At the first glance, I was very intimidated by lines of code. Computer science encourages me to think logically and critically about the challenges I have come face to face with. It made me realize that problems aren't as big and complicated as I may portray them to be, with one step after the other, and completely immersed in my work. I can accomplish anything. From the looks of it, Computer Science seems very technical, but it does have a creative aspect to it. When I code time flies by, as I actively design websites and construct lines of code. Problems lead to new discoveries and evolve into an endless learning process. Technology possesses a mind of its own and challenges the enclosed mentality I have sculpted; it was time to restructure how I viewed this abstracted world.
